PROFESSIONAL SUMMARY

Full Stack Developer and 2026 B.E. (Information Technology) graduate, currently working as a Full Stack Developer Intern at Brainzym Pvt. Ltd., building and shipping production web applications. Builds responsive interfaces and REST APIs using React, Vue.js, TypeScript, Node.js, and both SQL and NoSQL databases. Seeking full-time Full Stack or Frontend Developer roles in Bangalore/Bengaluru or remote.

EXPERIENCE

Full Stack Developer Intern, Brainzym Private Ltd, Bangalore, Karnataka

Jan 2026 - Present (6+ months)

Tech Stack: Vue.js, TypeScript, Tailwind CSS, Axios, Node.js/Express, PostgreSQL, REST APIs, Git

- Developed and maintained full-stack features for Brainzym's core web platform using Vue.js, TypeScript, and Node.js/Express REST APIs backed by PostgreSQL.
- Took ownership of the admin dashboard module (fitness-server-ui) end to end, building reusable Vue components with form handling, validation (zod), and API error, and testing and validating own work before production release in a team without a dedicated QA function.
- Designed and implemented a passcode-based student login flow end to end, covering Express API endpoints, PostgreSQL schema changes, and bulk import of student records from CSV.
- Troubleshoot, debugged, and optimized existing UI and backend modules, resolving critical bugs and improving application stability and performance.
- Collaborated with the tech lead and product owner in a cross-functional Agile team, gathering functional requirements, demonstrating completed work at sprint reviews, and participating in code reviews, sprint planning, and technical discussions.

PROJECTS

Ticket Booking Platform (AI-Assisted Development)

Tech Stack: Vue 3, TypeScript, Pinia, Vue Router, Tailwind CSS, Node.js/Express, MongoDB, Mongoose, JWT (JSON Web Token), Zod

- Built a full-stack event booking platform with seat selection and reservation, wallet-based payments, booking history, and a role-based admin panel for managing events, transactions, and refunds.
- Designed the concurrency handling to prevent race conditions on seat reservation and wallet transactions, ensuring seats could not be double-booked and wallet balances stayed consistent under simultaneous bookings.
- Authored complete functional and technical specifications, then broke delivery into small, context-scoped tasks sequenced to minimize context loss and model hallucination, driving AI coding tools to implement against the specification.
- Implemented JWT authentication, Zod request validation, and Pinia state management across the booking and admin flows.

Digital Dump (E-Waste Management Platform), Frontend Developer

Tech Stack: React, TypeScript, React Router, Axios, Mapbox

- Built the React and TypeScript frontend for a team-developed e-waste platform, covering user, collection agent, and admin experiences across pickup scheduling, education, rewards, and community modules.
- Developed a mobile-responsive interface with client-side routing and Mapbox pickup location mapping, consuming REST APIs via Axios with handled loading and error states.

TECHNICAL SKILLS

- Languages:** TypeScript, JavaScript, SQL, Python
- Frontend:** React.js, Vue.js (Vue 3), Next.js, Redux, Pinia, Vue Router, Tailwind CSS, HTML5, CSS3, Vite
- Backend:** Node.js, Express.js, REST API Design, JWT Authentication, Zod
- Databases:** PostgreSQL, MongoDB, Mongoose
- Testing:** Jest, ts-jest, Postman (API testing)
- Tools & Platforms:** Git, GitHub, VS Code, Docker, Linux, Vercel, Axios
- Concepts:** Role-Based Access Control (RBAC), Concurrency Handling, AI-Assisted Development, Agile/Scrum

EDUCATION

Bachelor of Engineering (B.E.), Information Technology

LDRP Institute of Technology and Research, KSV University, Gandhinagar Gujarat | 2022 - 2026 | CPI: 7.51/10
